

JOKARI: In-socket wire stripper for more efficiency

Wire stripper specialist JOKARI invented a new tool. The JOKARI XL in-socket wire stripper has been especially developed for working in plug sockets.

Ascheberg, February 13, 2018

JOKARI is famous for continually inventing innovative tools for all wire stripping demands in craftsmanship, industry and research and development. "We aim at developing products that are based on practical experience to support our professional users in their daily working situations", Carsten Bünnigmann, JOKARI managing director, states.

To give an example: Due to the ever-raising level in building automation in combination with electronics such as radio modules deep plug sockets and junction sockets are used. The JOKARI XL in-socket wire stripper fits this demand perfectly, as Carsten Bünnigmann points out. "Our new pro tool simplifies stripping, because users can reach all positions with a minimum of strength. The JOKARI XL length is adapted to deep plug sockets and enables to strip cables from the outside. Fingers are secured from sharp edges, and the ergonomic, non-sipping two-component grip zone with soft components offers an ideal power transmission." Thus, the JOKARI XL in-socket wire stripper optimizes stripping in building installation and automation.

The JOKARI XL in-socket wire stripper quickly and precisely strips all common cables with a \varnothing from 8-13mm. It is not necessary to adjust the cutting depth to the particular diameter, because the four specifically designed blades adapt automatically to the cable. Furthermore, the blades reduce effort and raise stripping precision. "That is our understanding of innovative product development. We want to simplify work best possible and accompany craftsmen and industrial workers to solve all stripping tasks without problems", JOKARI strategic sales director international and procurator Frank J. Goebbels says. The blades of the Technical Supervisory Association (TÜV) and GS tested tool has a titanium nitride cover. This allows a longer service life and a better slippage of the blades.

Additionally, Frank J. Goebbels points out an extra feature which is unique to JOKARI XL in-socket wire stripper. "A title block simplifies the personalization of the stripper to assign the tool to the particular user. JOKARI XL should not be missing in modern building technology."

About JOKARI

JOKARI-Krampe LLC from Ascheberg, Westphalia, is a global market leader for the production and distribution of high-quality precision wire strippers. Since its foundation 50 years ago, the company has been focusing on quality made in Germany and manufactures all wire strippers in its own factory with an attached plastics injection molding at the Ascheberg headquarter. JOKARI's task is to meet

the demands of its world-wide professional customers from industry and craftsmanship: They are asking to strip all types of wires quickly, precisely, easily, and safely for further handling – under all circumstances. According to this the company's innovations are geared to the latest developments in technical and industrial branches, for example in automotive and automation technology. Thus JOKARI is able to deliver exactly the wire strippers the customers need for their work. In addition JOKARI offers multimedia-based, multilingual solutions to provide quick assistance to customers all around world having questions on the use of the wire strippers.
