

## **Tried and tested rethought**

### **Further development of the product range with Sensor Special in design, ergonomics and durability**

*Ascheberg, September 2022: For over 50 years, users in the field of electrical installation have associated the name JOKARI with tools that stand for maximum precision, user-friendliness and convenient application. In addition, the stripping specialist is always working on the new and further development of its products. These are always based on the current state of the art, but also on user feedback.*

*Based on these aspects, JOKARI has upgraded the product range around the unique wire stripper Sensor Special. Ergonomically convincing, visually appealing and extremely durable due to the careful selection of stable materials and the optimization of the mechanics: This is how the innovations to the stripping pliers can be aptly described. In addition to the Sensor Special, further developments have also been implemented in the Sensor Mini, Flat Cable Stripper, 6-16<sup>2</sup>, AS-Interface Pro and the Outlet Special 20.*

### **Upgrade stands for new generation of JOKARI wire strippers**

JOKARI stripping tools are used intensively for many years by most users. "We attach great importance to our products not only fulfilling their purpose and delivering clean results. It is equally important to us that they are also durable. These are precisely the points we have worked on and optimized our product range around the wire stripper Sensor Special," says Carsten Bünnigmann, Managing Director of JOKARI-Krampe GmbH. "We carried out several test runs until we were satisfied with the interaction of all components and they were perfectly matched to each other."

### **Focus on ergonomic aspects**

With regard to the health of users and also in terms of effectiveness and productivity in everyday operations, more and more specialist users are using ergonomic hand tools. This aspect was the focus of the redesign of the JOKARI product family: The shape of the pliers handles was adjusted so that they fit even better and more comfortably in the hand and to enable a healthy and gentle body posture when executing stripping works. The soft grip zones integrated on the legs of the pliers ensure that the force transmission is distributed equally over all fingers, which is noticeably more comfortable and gentle for the user. The optimization of the mechanics ensures that less hand force has to be used during the stripping process. This increases user-friendliness, speeds up the stripping process and ensures greater safety.

### **Durability thanks to innovative exchangeable cassette system**

An important feature that almost all JOKARI stripping pliers have but many users do not know is the replaceability of the blades when worn. In the course of further product development, a completely new interchangeable cassette system was developed, which significantly simplifies blade replacement. This increases the service life of the tool and has a positive effect on the ecological footprint. The blades can be replaced in just a few seconds by loosening two screws on the tool.

JOKARI offers replacement blades for its wire strippers at qualified dealers and at [www.jokaru.eu](http://www.jokaru.eu).

## New design language for JOKARI wire strippers

JOKARI also sets the standard high in terms of appearance. "The new look of our revised stripping pliers around the Sensor Special, in combination with the ergonomic design and in interaction with the unique technical features as well as the perfect functionality, represents a solution and work relief for many users," explains JOKARI Managing Director Frank J. Goebbels.

### **About JOKARI**

JOKARI-Krampe GmbH from Ascheberg, Westphalia, is a specialist for the production and distribution of high-quality precision wire strippers. Since its foundation more than 50 years ago, the company has been focusing on quality made in Germany and manufactures all wire strippers in its own factory with an attached plastics injection molding at the Ascheberg headquarter. JOKARI's task is to meet the demands of its world-wide professional customers from industry and craftsmanship: They are asking to strip all types of wires quickly, precisely, easily, and safely for further handling – under all circumstances. According to this the company's innovations are geared to the latest developments in technical and industrial branches, for example in automotive and automation technology. Thus JOKARI is able to deliver exactly the wire strippers the customers need for their work. In addition JOKARI offers multimedia-based, multilingual solutions to provide quick assistance to customers all around world having questions on the use of the wire strippers.
