

Efficient wire stripping solutions in safety engineering

JOKARI exhibited different solutions for safety engineering professionals at trade fair "Security" in Essen.

Ascheberg, November 02, 2018

According to official numbers 116.450 burglaries happened in Germany in 2017, which is a decrease in comparison to 2015 with 167.136 cases. But still every two minutes criminals burgle into a house. To protect themselves and their property from burglars, house owners can use several mechanical and electrical systems. "All of them have to be installed by professionals. Especially the installation electrical systems is complex, for example the wire stripping", Carsten Bünnigmann says, managing director of wire stripping specialist JOKARI from Ascheberg (Westfalia). The company exhibited at trade fair "Security" in Essen to present wire stripping solutions to safety engineering professionals.

JOKARI's focus was on wire strippers Sensor Special, No.1-Cat and PWS-PLUS. "These tools were especially helpful in the installation of security components, we heard from expert users. Especially in safety engineering wires have to be stripped professionally and precisely. Our visitors gave us very good feedback on working with our strippers quickly and safely. Our tools have become a serious alternative to boxcutters", Carsten Bünnigmann points out.

Robert Pollmann from "Pollmann IT and Security Systems" ordered several tools at the trade fair and points out how the strippers simplify the work. "It's quick and clean stripping as we are used to it from JOKARI." He especially refers to automatic pliers Sensor Special to strip cords for magnetic and lock contacts accurately.

CAT-7 network cables are commonly used in safety engineering, too. For these wires JOKARI has developed its stripper No.1-Cat with two pairs of blades for the outer coating and foil shielding. Thus the cutting depths does not need to be adjusted. "Stripping Cat wires with No.1-Cat saves times. Instead of carving and removing the foil separately, they are cut with a pair of blades and removed with the fingers", Carsten Bünnigmann describes one of the prominent characteristics of the No.1-Cat.

"Smaller strands and conductors in video systems, door intercommunication systems and alarm systems can be stripped with micro precision stripper PWS-PLUS 002. Next to saving time our micro precision strippers offer a high reliability, because the lever blade can be changed", as Carsten Bünnigmann states.

About JOKARI

JOKARI-Krampe LLC from Ascheberg, Westphalia, is a global market leader for the production and distribution of high-quality precision wire strippers. Since its

foundation 50 years ago, the company has been focusing on quality made in Germany and manufactures all wire strippers in its own factory with an attached plastics injection molding at the Ascheberg headquarter. JOKARI's task is to meet the demands of its world-wide professional customers from industry and craftsmanship: They are asking to strip all types of wires quickly, precisely, easily, and safely for further handling – under all circumstances. According to this, the company's innovations are geared to the latest developments in technical and industrial branches, for example in automotive and automation technology. Thus, JOKARI is able to deliver exactly the wire strippers the customers need for their work. In addition, JOKARI offers multimedia-based, multilingual solutions to provide quick assistance to customers all around world having questions on the use of the wire strippers.
