

Allrounder from Ascheberg

Wire stripper specialist Jokari has developed a new product. "Allrounder" was presented for the first time in March at Eisenwarenmesse and is suited for stripping round and flat cables with only one tool.

Ascheberg, May 28, 2014

The range of cables and wires has become wider and wider in the last years. They differ not only in size (mm²) or diameter – a difference is also made between round and flat cables. Video, data, control, and sensor cable, Ölflex® and Cat wires: In industry and craftsmanship more and more types must be prepared for further handling. That requires an appropriate tool, but not one stripper for a specific demand but one that is professionally suitable for all different types of cables and wires used in the market.

With "Allrounder" Jokari has developed a wire stripper that can be used with round and flat cables in many working fields. Where painstaking and injury-prone work with sharp blades was necessary in the past, "Allrounder" fits perfectly.

"We have detected such a demand strongly", Jokari's managing director Carsten Bünnigmann explains. Family-run Jokari is market leader for high-quality wire strippers made in Germany and has been developing innovative solutions for industry and craftsmanship in the area of cable and wire stripping.

The name "Allrounder" is telling: removing of the coating, longitudinal sections, stripping of massive or flexible wires for crimping cable-end sleeves or other connections, exposing of wire lengths for specific connections, and a broad working field that includes for example round cables with a diameter from 4-15 millimeters, installation flat cables with widths up to 15 millimeters, and flexible wire with 1,5-50 mm² profile. The cables are entered in the particular stripping device and then, as users are used to with Jokari tools, stripped with a circular move quickly, safely, and precisely.

"Allrounder" combines the necessity with the essentials, Carsten Bünnigmann emphasizes: "Our new tool features a clever design that is adjusted to hand and workflows, a grip for ideal movement support, and a self-centering cable duct for longitudinal sections. Thus 'Allrounder' is very practice-oriented." Further specifications are a reconnectable length stop for right- and left-handers with parking position in the depot slot for free wire bypass and thus single-conductor stripping of any length, structured, side-blocking surfaces, and a glass fiber reinforced material choice for highest stability at a light weight.

But the managing director points out one thing: "Allrounder' is a high-quality wire stripper that the market lacked. It adds to our broad product range because with 'Allrounder' we have reacted to the demands of the market

easily. But the stripper does not replace our special wire strippers that are completely adapted for corresponding cable and wire types.“

Jokari-Krampe LLC from Ascheberg, Westphalia, is a global market leader for the production and distribution of high-quality precision wire strippers. Since its foundation more than 45 years ago, the company has been focusing on quality made in Germany and manufactures all wire strippers in its own factory with an attached plastics injection molding at the Ascheberg headquarter. Jokari's task is to meet the demands of its world-wide professional customers from industry and craftsmanship: They are asking to strip all types of wires quickly, precisely, easily, and safely for further handling – under all circumstances. According to this the company's innovations are geared to the latest developments in technical and industrial branches, for example in automotive and automation technology. Thus Jokari is able to deliver exactly the wire strippers the customers need for their work. In addition Jokari offers multimedia-based, multilingual solutions to provide quick assistance to customers all around world having questions on the use of the wire strippers.
