Feed Cables as if by Magic

JOKARI introduces the new generation of the Super Stripper

Ascheberg / Frankfurt, April 11th, 2010. When stripping round cables or conductors, JOKARI's Super Stripper becomes an indispensable tool. Now, the market leader for cable stripping and de-insulating technology has introduced an even better version of the uncomplicated helper for working with cables in trade or industry – with even more safety and precision. An integrated cable duct allows for even more precise length-wise cuts, and the re-envisioned blade design improves section cuts. The non-slip grip with its new soft component offers a more secure and safe hold, and the new locking mechanism can be opened effortlessly with a single press of the thumb. The new generation of the Super Stripper will be launched at "light + building" – the world's leading exhibition for light installations, electronics, household and building automation in Frankfurt from April 11th to 16th.

JOKARI'S new Super Stripper Secura No. 15 makes easy work of your everyday cable stripping needs. The soft-blue grip components guarantee a secure hold when stripping all standard round cables, such as NYM cables from 3 x 1.5 to 5 x 2.5 mm² with diameters from 8 to 13 mm. Conductors from 0.2 to 4 mm² can also be stripped effortlessly with the de-insulator tool. No adjustment is needed to prepare the tool for the required cutting depth. The special design of the stripping blade adjusts automatically to the chosen cable, indicating its precise diameter on an integrated scale.

Quicker and Safer

Another design feature is the new clip that allows the tool to be attached securely to work clothes. A length-wise cutter and an integrated, slide-out universal blade with Titanium-Nitride coating are the hallmarks of the renowned precision cutting technology offered by the JOKARI Super Stripper Secura No 15. The innovative product requires no long training and is simple

and intuitive in its handling. Exact clearances in the tool, a clip-lock with an ergonomically soft grip, and the redesigned cable ducts improve speed and safety when using the cable stripper. With this tool, cables are fed as if by magic.

Product launch at the Light+Building

The new generation of the JOKARI Super Stripper Secura No. 15 will be launched at “light + building” – the world’s leading exhibition for light installations, electronics, household and building automation in Frankfurt from April 11th to 16th. In its 43-sqm booth, the market leader for cable stripping and de-insulating technology from Ascheberg will introduce the new Super Stripper Secura No. 15 as its innovation for 2010.

The trade fair brings together the market leaders of the industry and offers an opportunity for worldwide product launches from over 2000 exhibitors from more than 50 countries to launch. Since its launch in 2000, the fair has been staged regularly every two years.

Hall 8, Booth F08
